LOKESH BURMA

SENIOR BACKEND SOFTWARE ENGINEER

Hyderabad, India | +91 9133283812 | lokesh.burma@outlook.com
Engineering Portfolio: lokeshburma.com | linkedin.com/in/lokeshburma | github.com/Lokesh-Burma

SUMMARY

Senior Backend Software Engineer with 5+ years of experience designing and building distributed job-processing platforms and cloud-native microservices for SaaS products on AWS. Strong production expertise in Go, Python, PHP, and SQL, complemented by production experience building Node.js and TypeScript microservices with NestJS and Express.js. Designs AWS services for a platform processing 50M+ daily backup jobs; mentors junior engineers; leads design and PR reviews, releases, and incident response; and develops AI-powered debugging and operational workflows.

TECHNICAL SKILLS

Languages: Go, Python, PHP, SQL, JavaScript, TypeScript
Backend, Architecture & Security: Node.js, NestJS, Express.js, REST API Design, Microservices, Distributed Systems, Asynchronous Processing, OAuth 2.0, Authentication, Authorization, RBAC, Secrets Management
Engineering Fundamentals: High-Level Design (HLD), Low-Level Design (LLD), Data Structures & Algorithms
AWS: ECS, EC2, ELB, Lambda, SQS, RDS, DynamoDB, FSx, Athena, Parameter Store, ECR, Route 53, CodeCommit
Data, Messaging & Quality: PostgreSQL, Redis, DynamoDB, Amazon SQS, Unit & Integration Testing
AI Engineering: LangFlow, RAG, AI Agents, Agentic Workflows, Embeddings, Claude Code
Delivery & Observability: Docker, Git, CI/CD, Azure DevOps, Grafana, Kibana, Linux

PROFESSIONAL EXPERIENCE

SysCloud Technologies Pvt Ltd — Hyderabad, India

Progressed from Intern (Nov 2020) to Software Engineer (May 2021) to Senior Software Engineer (May 2023)

Senior Software Engineer — **May 2023 - Present**

- **Data Migration Architecture:** Designed and implemented a PHP-based dual-store routing layer that directs backup, restore, and export operations between PostgreSQL on Amazon RDS and S3 Tables while preserving record versioning and supporting concurrent migration.
- **Migration Scale & Impact:** Enabled the ongoing migration of **395 TB** of historical Gmail, Google Drive, and Outlook data across approximately **2,000 customers**; completed migration for **85 high-volume customers**, reducing database load, improving historical-query performance, and limiting future RDS storage growth.
- **AI Operations:** Built an operations platform using Node.js, TypeScript, Python, AWS Lambda, and LangFlow to evaluate infrastructure and application health; generates **15 specialized reports**, publishes findings to Microsoft Teams, and creates and assigns Azure DevOps incidents.
- **AI-Assisted Debugging:** Developed a Claude Code agent with MCP access to source code, Kibana, databases, and Azure DevOps; grounded analysis with incident history, embeddings, and design context to recommend fixes, achieving **85%+ root-cause identification accuracy** based on developer reviews.
- **Failure Transparency:** Partnered with database and product-management teams to build the Eligible/Ineligible Items capability across PHP and JavaScript/TypeScript microservices with PostgreSQL; expanded the cross-cloud taxonomy from approximately **350 to 3,000+ error codes** and added per-item history, retryability, customer actions, resolutions, and help content, reducing related support tickets by **60%**.

Software Engineer — **May 2021 - Apr 2023**

- **Distributed Backup Platform:** Built and modernized Unified Backup supporting **50M+ daily incremental backup jobs** across 10+ SaaS applications; migrated legacy workflows into a PHP worker framework orchestrated by a Go scheduler with Amazon SQS-backed job management, parallel processing, versioning, and daily snapshots.
- **FSx Allocation:** Replaced a five-task ECS Fargate Network Drive API with a Redis-backed PHP package embedded in Unified Backup, eliminating the standalone service while preserving capacity-aware FSx for Lustre allocation and failover; reduced API calls by approximately **80%** and database calls by an estimated **20-30%**.
- **Platform Modernization:** Helped decompose a legacy cloud-backup monolith into independently deployable microservices, rewriting Unified Backup and migrating workloads from EC2-hosted processes to Docker containers on Amazon ECS; improved maintainability, deployment isolation, and production visibility through structured service-level logging.

EDUCATION & CERTIFICATION

INSTITUTION	QUALIFICATION	YEAR
BITS Pilani - WILP	M.Tech in Cloud Computing	2023 - 2025
Lovely Professional University	B.Tech in Computer Science and Engineering	2017 - 2021
Amazon Web Services	Certified Solutions Architect - Associate	2021 - 2024 (Expired)
